Universal Health Coin, as a Public Benefit Corporation, is an anonymous crypto token-based healthcare finance system utilizing blockchain technology as a utility to decentralize the provision and fair payment of health services worldwide. To the UHC member and the health service provider, it looks and acts like any other cash-based transaction as illustrated below. However, UHC is operated by the network and NOT by a central governing body.

Pre-Token Sale to Stakeholders: UHC is acquiring pre-purchases of UHC at a discount for future UHC members who wish to buy UHC for up to an 80% discount of the Official Token Sale price. The UHC Token price will be tied to NEO's NEP5 token. For more information on buying UHC at a discount, reach out to UHC by sending an email to tokensale@universalhealthcoin.org or go to www.universalhealthcoin.com

This document is prepared solely to inform the public, potential collaborators, and participants to the development of Universal Health Coin. The ultimate implementation of UHC is dependent upon several factors and risks outside the control of UHC including regulatory risks and contributor participation. This does not constitute an offer to buy tokens nor equity based securities in Universal Health Coin. Any such offer or solicitation will be made only by means of a confidential offering in accordance with applicable securities and other laws of the United States.
